

WILLIAM J. COSTINE, JR.

With more than 25 years experience, Bill Costine is a well-rounded Senior Designer responsible for overseeing project design and construction documents in the New York and Connecticut offices. In addition, he meets regularly with clients, supervises construction administration activities, and manages the office computer systems.

Education/Licensing

B. Arch., California Polytechnic State University
Registered Architect, State of California

Experience with Allan Greenberg, Architect, LLC:

During his 20 years with the firm, Bill has been extensively involved with many residential projects, including a 25,000-s.f. stone house in Greenwich; a 4,000-s.f. cottage in an environmentally sensitive seashore area of Cape Cod; renovations to houses, outbuildings, and a new stable for a farm in Bedford, CT; a 19,000-s.f. brick and limestone residence in New Jersey; an 11,000-s.f. Italianate villa on a South Carolina island; an apartment renovation in New York City designed to accommodate a museum-quality art collection; a pavilion for an indoor swimming pool in Greenwich; and a renovation in Massachusetts that incorporates antique Asian artifacts into the overall design.

Additional projects in which he was involved include the boardroom for a private boys' school; the New-York Historical Society renovation; numerous office improvements; an antique automobile showroom; a computer-automated greenhouse; a playhouse modeled after Mount Vernon; and the design and production of furniture.

Other Professional Experience:

Before moving to the east coast, Bill had a successful architectural consulting practice in California. His services included complete design or construction document packages for a variety of projects: an urban renewal streetscape plan for the city of San Jose, CA; a laboratory for IBM; a Japanese restaurant; and many residences. In addition, he provided office management analysis to firms interested in improving services and office efficiency, including, in one case, revamping the way the firm used their computer drafting facilities.

Prior to operating his own practice, Bill had broad experience with other firms. He worked on a law library; research facilities for Union Oil; the executive dining room for American Airlines Corporate Headquarters; did site development and building graphics for Toyota Corporate Headquarters; master planning for Yanbu Industrial City, Saudi Arabia; and the urban renewal of the River Mugnone in the city of Florence, Italy.
